DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferraro (4,438,486 – cited in IDS filed 6/10/02)) in view of Bendikas et al (6,368,064).

Ferraro discloses a capacitor (5) and diode (7) in series, together connected in parallel with a switch (3), a power converter (11a, 11b, 13, 23), such as DC/AC /DC converter, connected in parallel with the capacitor (5), but fails to disclose different types of cooling elements, such as fan, liquid pump, and peltier device, powered by a power converter for cooling the switching power supply. Bendikas et al, however, teaches that the use of a cooling element (12) powered by a power converter (24) for cooling the switching power supply is well known in the art. Thus, it would have been obvious to one having ordinary skill in the art to

employ a desired cooling element to obtain the claimed invention, as taught by Bendikas, for the purpose of protecting the power supply by removing the heat.
